Additions are underlined, please amend claims 9 and 42 as follows:

9.) A terminal device comprising:

a memory;

instructions stored in the memory to call a runtime environment with an operating system included in the terminal device;

instructions stored in the memory to interpret and execute an application with the runtime environment under control of the operating system;

instructions stored in memory to detect receipt of a first predetermined event;

instructions stored in the memory to call the runtime environment to suspend operation of the application that is currently being executed in response to the first predetermined event;

instruction stored in the memory to initiate resumption of execution of the application in response to a second predetermined event;

instructions stored in the memory to extract the stored event data;

instructions stored in the memory to call the runtime environment to resume execution of the application;

instructions stored in the memory to provide the extracted stored event data to the resumed application, wherein the application is resumed in accordance with the extracted event data; and

instructions stored in the memory to generate a message originated from the resumed application that notifies a user of the first predetermined event.

42.) A terminal device comprising:

a memory;

instructions stored in the memory to download and store an application in response to a user command;

instructions stored in the memory to control a runtime environment with an operating system included in the terminal device;

instructions stored in the memory to interpret and execute the application with the runtime environment under control of the operating system;
